## FEATURES OF THE TINYLOC TRACKER

- Will detect a collar from 20km in radio tracking mode and 7km in GPS mode.
- In GPS mode, the receiver indicates direction, distance and collar battery status.
- Capacity to memorise 100 different dogs.
- Can search for a GPS point such as your car or where you left some game.
- TinyLoc will track other collar brands in radio tracking mode.
- Uses off-the-shelf replaceable batteries.
- 2 year warranty backed up by our renowned after sales service.

ACCURACY  
CHALLENGE

*If the TinyLoc is not the most accurate tracking system you have used, return it within 30 days of purchase for a full refund. We guarantee it!*

## The TinyLoc GPS System

Both the handheld receiver and the collar transmitter have built in GPS antennas giving their exact positions. When the collar sends a signal to the receiver, it transmits it's position and status and the receiver displays this information using an electronic compass.

Because it is more complex to transmit a GPS location than a simple "beep", the radio tracking always has 3-4 times more range than the GPS. This is why you will find the dog first with radio tracking mode and then in the last kilometres will you have the exact position with GPS.
